

Try the quoting portal

A practical guide for testing and giving feedback

Enquiry → quotation → acceptance → job → invoice → payment

This is a working browser-only demonstration. Try an orders list, job sheets, conversation records and the status of enquiries and jobs. Use fictional information while exploring.

Open the demo

<https://fingergame.co.uk/FingerOfShame/QuotingPortal/>

Before you begin

Use a current desktop browser and keep one demo tab open. Data stays in that browser. There are no real accounts, shared records, outgoing emails or payments. Download backups if you want to keep your test work.

Screenshots show fictional records at different points in the walkthrough. Your first visit starts with a customer, an enquiry and a draft quote; orders and invoices appear after the acceptance steps.

Start with the overview

Your next actions and current work

1. Open the demo link. The first visit loads the app and its database engine. Allow a little time; keep one demo tab open.

2. Use Alex · Owner. The Simulation role selector lets you try staff access or a separate fictional business later.

3. Open a next action. Edit its owner or due date. Tick the box when the task is complete.

4. Open an enquiry. The left menu stays available as you move through the workflow.

Start with fictional records. Your changes belong to this browser; Andy will not automatically see them.

Customers

One customer record, with repeat work linked to it

1. Choose Customers → New customer. Enter a fictional name, organisation and address.
2. Add contacts and sites. Keep the person you speak to and the work location with the customer.
3. Save record. Select the saved customer to see details, history and internal notes.
4. Choose New enquiry. Reuse the same customer for later jobs instead of making duplicate records.

Search finds matching records. Save view becomes available when a search is entered. Attachments and internal notes are separate from customer documents.

Enquiries and pipeline

Track the next step before work is agreed

1. Choose Pipeline → New enquiry. Select the existing customer, owner and stage.
2. Save and open the card. Change Pipeline stage as the enquiry progresses; add notes, tags and follow-ups.
3. Choose Prepare quote. The customer and enquiry stay linked. An enquiry can have more than one quote.
4. Record a lost enquiry. Use the Lost stage when work does not proceed.

Moving a stage to Won does not accept a quotation, create payment or change agreed prices. Acceptance has its own explicit step.

Conversations and follow-ups

Keep the discussion and the agreed next action together

Save conversation

No conversations recorded yet.

Follow-ups

Add follow-up

No follow-ups yet.

Internal attachments

Private to your business. Text, PDF or images, up to 2 MB.

Add attachment

1. Open a customer, enquiry or job. Scroll to Conversations and choose Log conversation.
2. Record the details. Choose Phone, Email, Meeting, Message or Other; enter the date, participants and summary.
3. Add a next action if needed. Set its due date and owner. Save conversation creates the note and linked follow-up together.
4. Use the history. Conversation notes remain with the work; follow-ups also appear in next actions.

This records what happened. It does not send an email or message, read a mailbox or synchronise a calendar.

Illustrative fabric

Quantity

8.5

Unit

metre

Net unit price (£)

45

Tax fraction (0.2 = 20%)

0.2

Discount fraction

0

Remove item

1. Open Quotes. Select the sample draft and Edit, or choose New quote / Prepare quote from an enquiry.
2. Enter the items. Use descriptions, quantities, units and net unit prices. Tax inputs are fractions: 0.2 means 20%.
3. Set a future validity date. Check the totals and save the record.
4. Review customer document. Check the customer, scope, branding, totals and terms before issuing.

The example tax rate is illustrative. Owners control prices and issuing. Private costs and internal notes are excluded from the customer document.

Terms

Simulation only. No commercial agreement or payment is created.

Valid until 2026-11-03.

Review and accept (simulation)

☒ I have reviewed this fictional quote and want to simulate acceptance.

Simulate acceptance

No money moves and no commercial agreement is made.

1. Issue & simulate send. Available to the owner after reviewing the current customer document.
2. Open the local customer preview. Check the quotation and use Download PDF for the stored copy.
3. Tick the review confirmation. Choose Simulate acceptance. One linked job is created.
4. Return to the workspace. Find the accepted work under Orders and Jobs.

No email is sent and no commercial agreement is made. The customer-preview address only works with this browser's data; send your friend the main demo URL instead.

Orders list

A single view of accepted work

1. Choose Orders. Accepted quotes appear here as linked jobs. A fresh demo has no orders until you accept work.

2. Filter the list. Search, choose a stage or choose a member of staff.

3. Check the outstanding work. Each order shows agreed items, target date, checklist and follow-up counts.

4. Open job or Print job sheet. Printable orders list produces a separate internal report.

The printable orders list includes all accepted work, ordered by target date. Screen filters do not currently restrict that report.

Job tracking

Manage the work without changing the accepted scope

1. Open a job and choose Edit. Set the assigned person, operational stage and target delivery/fitting date.
2. Record measurements. Include units and clear internal instructions, then Save record.
3. Work through the checklist. Tick completed steps and keep the stage up to date.
4. Add supplier order. Record the supplier, reference, expected date and ordered/received status.

Agreed job items come from the accepted quote. Operational edits do not rewrite that agreement. Reviewed commercial variations are not enabled yet.

Measurements

Fictional example: track width 240 cm; finished drop 220 cm. Recheck before ordering.

Checklist

☐ Confirm measurements

1. Choose Printable internal job sheet. It includes agreed items, measurements, checklist, supplier orders and instructions.
2. Choose Print / Save as PDF. Use your browser's print dialogue and select A4 or Save as PDF.
3. Review the preview. Check page breaks and turn off browser headers/footers if you do not want the page address printed.
4. Keep it internal. Use the separate quotation or invoice PDF for customer-facing documents.

Job sheets and orders reports use the current Settings logo and company name. Stored issued quotations and invoices retain their original branding.

12 hour × £42.5

£183.60

£153.00 net

Additional materials

1 job × £95

£34.20

£28.50 net

Delivery and fitting

1 job × £57.5

£20.70

£17.25 net

Net

£313.50

Illustrative tax

£62.70

1. Choose Invoices. Select an accepted quote and a 30% or 50% initial invoice, or all remaining unbilled work.

2. Issue simulated invoice. Select it to see its branded document and Stored PDF.

3. Record a simulated payment. Enter the amount, date and reference. Partial payments leave an outstanding balance.

4. Bill the balance later. All remaining unbilled work excludes the initial invoice, even when it is still unpaid.

No funds move. For the £1,254 example: 30% is £376.20; remaining billing is £877.80. Recording £100 against the initial invoice leaves £276.20 unpaid on that invoice.

Default job checklist (one step per line)

Confirm measurements

Review materials

Arrange delivery / fitting

1. Rename, add or reorder stages. Sales stages and job stages are configured separately. Archive stages you stop using.

2. Set tags and the default checklist. Put one value or step on each line; save business settings.

3. Add a custom field. Choose customer, opportunity or job; use text, number, date, choice or checkbox. Add to settings, then save.

4. Set staff permissions. Grant prices, issuing, payments or costs explicitly and choose Save staff access.

Custom fields remain internal. Saved field types and existing choices cannot be changed; archive and replace when needed. Role switching is a demonstration, not a secure login.

Interiors calculators

Inputs can be recorded; quantities are not yet calculated

EXAMPLE INTERIORS

Calculators

Capture inputs for the interiors calculation review.

Curtain fabric

Standard blind

Box cushion

Curtain fabric

Awaiting rule validation

Confirm fullness, heading and hem allowances, pattern matching and whole-width rounding.

No quantity or price will be calculated until the business rules and worked examples are verified. Inputs can be saved for that review.

Related enquiry or job

Living room curtains

Measurement unit

Centimetres

Track width

Finished drop

Fabric width

Pattern repeat

Fullness

Hem allowance

Save inputs for review

Calculate & apply to quote

Saved input reviews

1. Choose Calculators. Pick Curtain fabric, Standard blind or Box cushion.

2. Link the enquiry or job. Select the measurement unit and enter the supported inputs.

3. Save inputs for review. The inputs and rule version are retained for the validation work.

4. Supply worked examples as feedback. Explain expected results, allowances, repeats and rounding.

Calculate & apply to quote is deliberately disabled. Unverified spreadsheet formulas are not product rules. Specialist pleat, faux-blind and cascade variants remain deferred.

Keep your test work

Backups, exports and browser limitations

Backup demo: prepares a .qpdemo file containing both fictional businesses, records, branding, attachments and stored PDFs. If the download does not start, use the Save link that appears. Check that the file actually reaches your Downloads folder before relying on it.

Restore backup: choose a trusted .qpdemo file and confirm. The restored copy becomes the working demo after reload. It replaces the active view rather than merging records; the prior browser database is retained separately. Keep a separate backup before restoring.

Export business records: Settings provides a readable JSON export limited to the selected role. This is an internal reference export, not the full restorable backup or a customer report.

Storage limits: clearing site data, private browsing or browser storage eviction can remove your work. Different browsers, devices and visitors have separate records. There is no automatic cloud backup or synchronisation.

Access limits: the public link has no login. The role selector is a simulation, and anyone using the same browser profile can access its demo data. Use fictional customer information only.

If something looks wrong: note the screen, action, expected outcome and actual outcome. Save a screenshot and a backup if useful. Reload only after saving any form edits. Use the main demo URL; customer-preview links cannot be used by someone on another device.

Costs and what comes next

No additional hosting charge for this browser demo

Browser-only demo now: £0 additional hosting per month. It uses the existing GitHub Pages site and domain. No new paid service or domain is needed. Existing domain renewal costs remain unchanged. This does not include development or maintenance time.

Optional shared hosted test later: from US\$7.25/month before tax. A candidate Render setup is a US\$7/month 512 MB server plus US\$0.25/month for 1 GB persistent disk. The smallest server still needs memory and load testing; this is a pricing floor, not a confirmed deployment specification.

More memory: US\$25.25/month before tax. A 2 GB server plus 1 GB disk is an alternative baseline. GBP totals depend on exchange rate, tax and payment-provider charges. Extra usage, email, managed database services or additional storage would be separate.

Still outside this demo: real login/invitations, shared team records, emails, real payment processing, verified interiors calculators, reviewed tax/accounting rules, commercial variations, credits/refunds and production support. A hosted test needs access controls and a tested backup plan before real information is used.

Useful feedback: Which order fields are missing? What should a job sheet show? Which conversation details and follow-ups matter? Which enquiry/job stages fit your business? What should each calculator return for a worked example?

Pricing reference: render.com/pricing · Checked 4 October 2026. No paid hosting has been purchased. The PDF can be revised as the workflow develops.
